TITLE

Design Static Webpage Using HTML Components

AIM

To understand and implement pure semantic HTML5 components for designing a static webpage without using any CSS styling.

OBJECTIVES

- Create a valid HTML5 document using only semantic and structural tags.
- Design a page header with a title and navigation links using tables and native elements.
- Organize page content using semantic elements such as main, article, section, and aside.
- Build an interactive demonstration form using native HTML form controls.
- Apply ordered and unordered lists to present structured information.

CONCEPTS COVERED

- HTML5 Document Structure
- Semantic Elements (header, nav, main, section, article, aside, footer)
- Tables for Layout
- Text Formatting
- Hyperlinks and Navigation
- Ordered and Unordered Lists
- Forms and Native Input Controls

TASK DESCRIPTION

Design a pure semantic HTML webpage titled "StaticWeb" that relies entirely on native browser defaults for layout and presentation, with no external or internal CSS. The page includes a header with a site title and navigation bar, a hero/showcase section, a two-column main layout built with a structural table (an article column and a sidebar), a demonstration inquiry form using standard form controls, and a footer.

ALGORITHM / PROCEDURE

1. Create an HTML5 document using the DOCTYPE declaration and html, head, and body elements.
2. Add a header section containing the site title and a navigation bar using a table for alignment.
3. Add a hero/showcase section introducing the purpose of the page.
4. Create a two-column main layout using a structural table: a left column for main content and a right column for a sidebar.
5. Inside the main column, add article elements describing core structural tags and native interaction elements.
6. Design a demonstration inquiry form using fieldset, legend, text, email, select, and textarea controls.
7. Inside the sidebar (aside), add unordered and ordered lists describing benefits and required components.
8. Add a footer with closing text.
9. Open the HTML file in a browser and verify the displayed webpage.

PROGRAM / SOURCE CODE

The following pages contain the submitted HTML source code screenshots.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Pure Semantic HTML Static Webpage</title>
</head>
<body>

  <!-- Header Section -->
  <header>
    <table width="100%" border="0" cellspacing="0" cellpadding="10">
      <tr>
        <td>
          <h1>StaticWeb</h1>
        </td>
        <td align="right">
          <nav>
            <a href="#home">Home</a> &nbsp;|&nbsp;&nbsp;
            <a href="#articles">Articles</a> &nbsp;|&nbsp;&nbsp;
            <a href="#about">About</a> &nbsp;|&nbsp;&nbsp;
            <a href="#contact">Contact Us</a>
          </nav>
          You, 3 weeks ago • Organize lab files into folders ...
        </td>
      </tr>
    </table>
  </header>

  <hr>

  <!-- Hero / Showcase Section -->
  <section id="home">
    <center>
      <h2>Semantic Structures Without CSS</h2>
    </center>
  </section>

```

```

    <h2>Semantic Structures Without CSS</h2>
    <p>This layout uses raw HTML components to build an organized document hierarchy that browsers
    can cleanly parse out-of-the-box.</p>
    <p><a href="#articles"><b>Read Our Articles Below &ldarr;</b></a></p>
  </center>
</section>

<hr>

<!-- Main Content Layout using a Structural Table -->
<table width="100%" border="0" cellspacing="0" cellpadding="20">
  <tr valign="top">

    <!-- Left Side: Main Content Column -->
    <td width="70%">
      <main id="articles">
        You, 3 weeks ago • Organize lab files into folders
        <article>
          <h2>1. Core Structural Tags</h2>
          <p>Published: July 7, 2026</p>
          <p>When you omit cascading style sheets entirely, the semantic markup handles all
          of the structural heavy lifting. Elements like <code>&lt;main&gt;</code>, <code>&
          lt;article&gt;</code>, and <code>&lt;section&gt;</code> tell screen readers and
          web scrapers exactly how information flows.</p>
          <p>Using raw browser defaults ensures excellent loading performance, perfect
          accessibility compliance, and absolute structural clarity.</p>
        </article>

        <br><hr><br>
      </main>
    </td>
  </tr>
</table>

```

```
<article>
  <h2>2. Native Interaction Elements</h2>
  <p>Published: July 5, 2026</p>
  <p>Browsers come equipped with excellent interactive elements by default. We can
  capture text inputs, provide multiple-choice configurations, and submit structured
  information to backend parsers using pure markup.</p>

  <h3>Interactive Demonstration Forms</h3>
  <form id="contact" action="#" method="post">
    <fieldset>
      <legend><b>User Inquiry Form</b></legend>
      <p>
        <label for="name">Full Name: </label>
        <input type="text" id="name" name="username" required
        placeholder="John Doe">
      </p>
      <p>
        <label for="email">Email Address: </label>
        <input type="email" id="email" name="useremail" required>
      </p>
      <p>
        <label for="topic">Inquiry Topic: </label>
        <select id="topic" name="usertopic">
          <option value="general">General Feedback</option>
          <option value="technical">Technical Architecture</option>
          <option value="academics">Academic Curriculum</option>
        </select>
      </p>
    </fieldset>
  </form>
  <p>
```

```

        </p>
        <p>
            <label for="message">Message Details:</label><br>
            <textarea id="message" name="usermessage" rows="5" cols="40"
            placeholder="Type your notes here..."></textarea>
        </p>
        <p>
            <input type="submit" value="Submit Form Data">
            <input type="reset" value="Clear Entries">
        </p>
    </fieldset>
</form>
</article>

</main>
</td>

<!-- Right Side: Sidebar Column -->
<td width="30%" bgcolor="#f4f4f4">
    <aside id="about">
        <h3>Document References</h3>
        <p>Static pages map data out directly without real-time database queries or processor
        overhead.</p>

        <h4>Core Benefits:</h4>
        <ul>
            <li>Instant browser painting</li>
            <li>Low memory footprints</li>
            <li>High data compatibility</li>
            <li>High data compatibility</li>
        </ul>

        <h4>Required Components:</h4>
        <ol>
            <li>Document Type Definition</li>
            <li>Semantic Wrapper Blocks</li>
            <li>Data Input Control Interfaces</li>
        </ol>
    </aside>
</td>

</html>

```

CODE EXPLANATION

HTML Element / Feature	Purpose
HTML5 DOCTYPE	Declares that the document uses HTML5.
header / h1	Displays the site title, StaticWeb.
table (header)	Aligns the site title and navigation links on the same row.
nav / a	Provides navigation links to Home, Articles, About, and Contact Us.
section#home / center	Presents the hero showcase heading and introduction text.
table (main layout)	Creates a two-column structural layout without CSS.
main / article	Organizes core content into logically grouped articles.
code	Displays inline HTML tag names as formatted code text.
form / fieldset / legend	Groups the inquiry form and labels it.
input (text, email)	Collects the user's name and email address.
select / option	Provides a dropdown to choose the inquiry topic.
textarea	Accepts longer free-text message details.
input (submit, reset)	Submits or clears the form data.
aside	Displays supplementary sidebar content.
ul / ol / li	Presents core benefits and required components as lists.
footer	Displays the closing copyright text.

TEST CASES AND EXECUTION DATA

Test Case	Verification	Expected Result	Observed Result	Status
TC-01	Page loading	Webpage is displayed	Page displayed	Pass
TC-02	Navigation	Navigation links are visible	Links visible	Pass
TC-03	Layout structure	Two-column layout is displayed	Layout displayed correctly	Pass

Test Case	Verification	Expected Result	Observed Result	Status
TC-04	Inquiry form	Form controls are displayed	Form controls displayed	Pass
TC-05	Sidebar lists	Benefit and component lists are visible	Lists visible	Pass

OUTPUT

The following are the actual browser output screenshots for this task.

RESULT

Thus, a static webpage was successfully designed using pure semantic HTML components without any CSS styling. The webpage demonstrates HTML5 document structure, semantic layout elements, table-based alignment, navigation links, an interactive demonstration form, and structured lists. The supplied browser screenshots verify the implemented features.
